

## Shopping cart low fidelity prototype

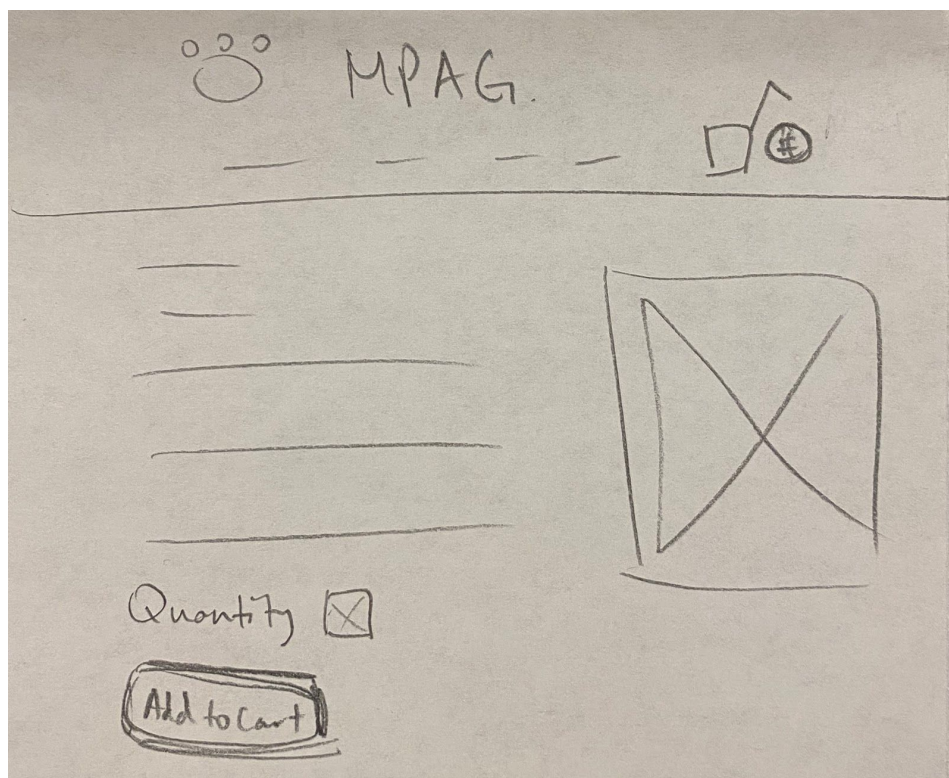

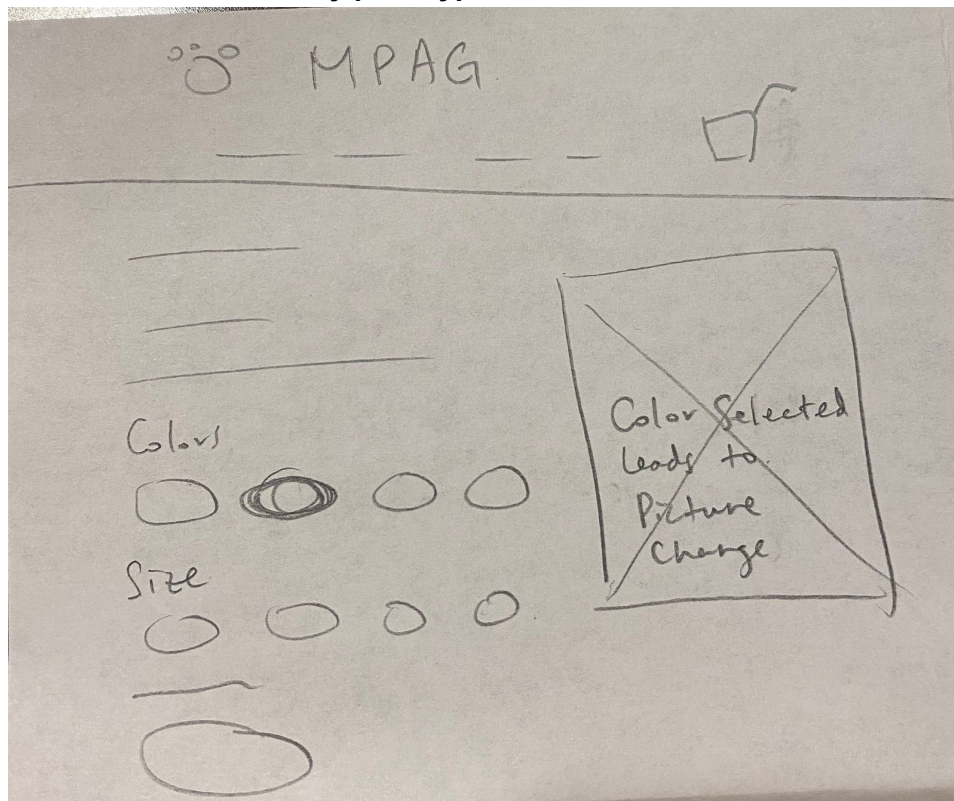

## Shopping cart high fidelity prototype

This page shows the mockup for the shopping cart page that can be accessed by clicking the shopping cart on the right. The shopping cart displays how many items are in the cart. The different items that are added are shown with purchasing information including product name, color selection, size selection, quantity selection, price, and product image. A check out button is at the bottom alongside the total price. This page tells the user what items they have in their cart, and allows them to view the selected information before purchasing.

This page shows the product details page. When color is selected, the product image changes to reflect the color selection. When quantity is selected and the add to cart button is clicked, the item quantity added to cart is displayed as a number next to the shopping cart icon. These actions allow the user to see the difference when they choose the product color, and then lets the user know that the correct item quantity has been added to the cart.
